The background features abstract, overlapping geometric shapes in various shades of blue, ranging from light sky blue to deep navy blue. These shapes are primarily located on the left and right sides of the slide, framing the central white area where the text is placed.

# GRAPHICS AND ANIMATION IN EDUCATION

## ▶ What is Graphic Design?

- ▶ Graphic Design is the craft of creating visual content to communicate messages. [ID Foundation]
- ▶ Graphic Design is the art of visual communication. «Grafik tasarım, görsel bir iletişim sanatıdır.» [Emre Becer]
- ▶ Graphic Design is the process of visual communication and problem-solving through the use of typography, photography, and illustration. [Wikipedia]

# GRAPHICS AND ANIMATION IN EDUCATION

- ▶ History of Graphic Design

- ▶ When, the first graphic design ?

# GRAPHICS AND ANIMATION IN EDUCATION

- ▶ History of Graphic Design
  - ▶ The term “graphic design” was coined by William Addison Dwiggins in 1922. [Paul Shaw]
  - ▶ The origins of graphic design can be traced from the origins of human existence...

the caves of Lascaux, around 15,000 BC

Pictographs, from 50,000 BC

- ▶ Graphic Design Principles

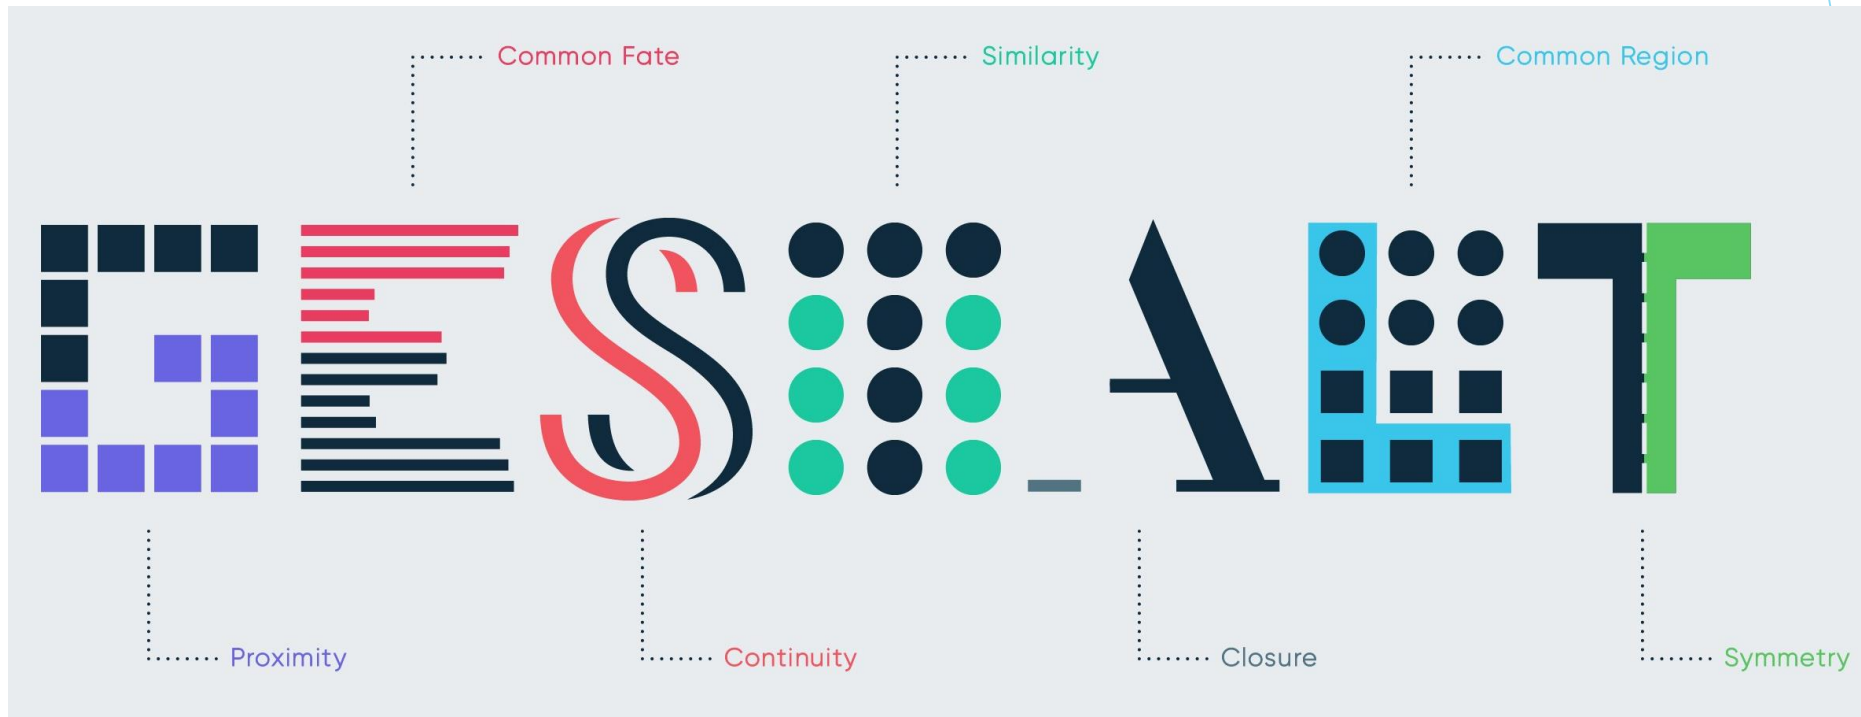

- ▶ GESTALT THEORY

**"The whole is something else than the sum of its parts."**

- ▶ When the human mind (perceptual system) forms a percept or "**gestalt**", the whole has a reality of its own, independent of the parts. [Bing Liu et. al.]

# GRAPHICS AND ANIMATION IN EDUCATION

## DESIGNING WITH GESTALT PRINCIPLES

10 primary principles underpin the practical uses of Gestalt Psychology

1

### Simplicity

Combining simplicity with creativity can lead to stunning creations.

**How to Master Simplicity:** Know how to balance simple shapes with visual stimulation. Give the eye a comfortable form that helps it interpret what it sees.

2

### Figure-Ground

People can immediately identify which element is the figure, and which is the ground. Use these two related principles to make the most of the figure-ground effect:

- **Area** - The viewer's mind sees the smallest element as the figure and the larger one as the ground or background.
- **Convexity** - Convex elements are related to figures.

3

### Proximity

Elements close to each other are perceived as part of the same group.

**Common Use**  
Case: Kerning. Proper kerning helps readers snap up each word.

4

### Similarity

Elements that look alike are perceived as part of a group. The principle of similarity applies to:

- Color
- Shape
- Size
- Texture
- Orientation

5

### Common Fate

Objects that seem to be moving in the same direction are often seen as a group.

6

### Symmetry

The principle of symmetry applies to

- Mirrored shapes
- Balanced elements
- Parallel lines

7

### Continuity

Objects that are plotted in a continuous pattern are grouped together by the mind. Smooth lines often make a unified figure.

8

### Closure

The mind wants closure. A shape only needs to be implied for the mind to "fill in the gaps" and see what it wants to see.

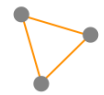

9

### Common Region

Elements in one region are seen as one group. Badge designs are seen as unified, despite some containing text, banners, and other objects.

10

### Connectedness

When there is a connection between elements, it is easy to see a unified figure.

Achieve connections with:

- Arrow
- Lines
- Illustrations (i.e. a rope)

### Gestalt Theory

Humans are bombarded with countless signals day-to-day. To keep from going crazy, we unify these signals into groups. Gestalt designers are obsessed with how people put objects together in their minds.

Good designs leads people to experience the message you want to convey.

Arm yourself with the principles of Gestalt and create designs that have the impact you want.
